PLEATED FLYSCREEN

The Window Art difference

At **Window Art**, we chose this pleated system after using it ourselves. Three things mattered most to us: everyday convenience, low maintenance and a slimline look that never gets in the way.

**Slimline by design**

Folds neatly to the side when open, keeping your view and doorway clear.

**Low bottom rail**

Just 1cm high, so it's easy to step over for kids, pets and everyday traffic.

**Everyday convenience**

Opens and closes smoothly with one hand.

**Low maintenance**

A simple, durable design that's quick to keep clean.

**Better in light rain**

The fine pleated mesh helps shed light rain better than a flat mesh.

**Wide openings**

Covers openings up to 8 m wide with a double-opening set.

Only where you open

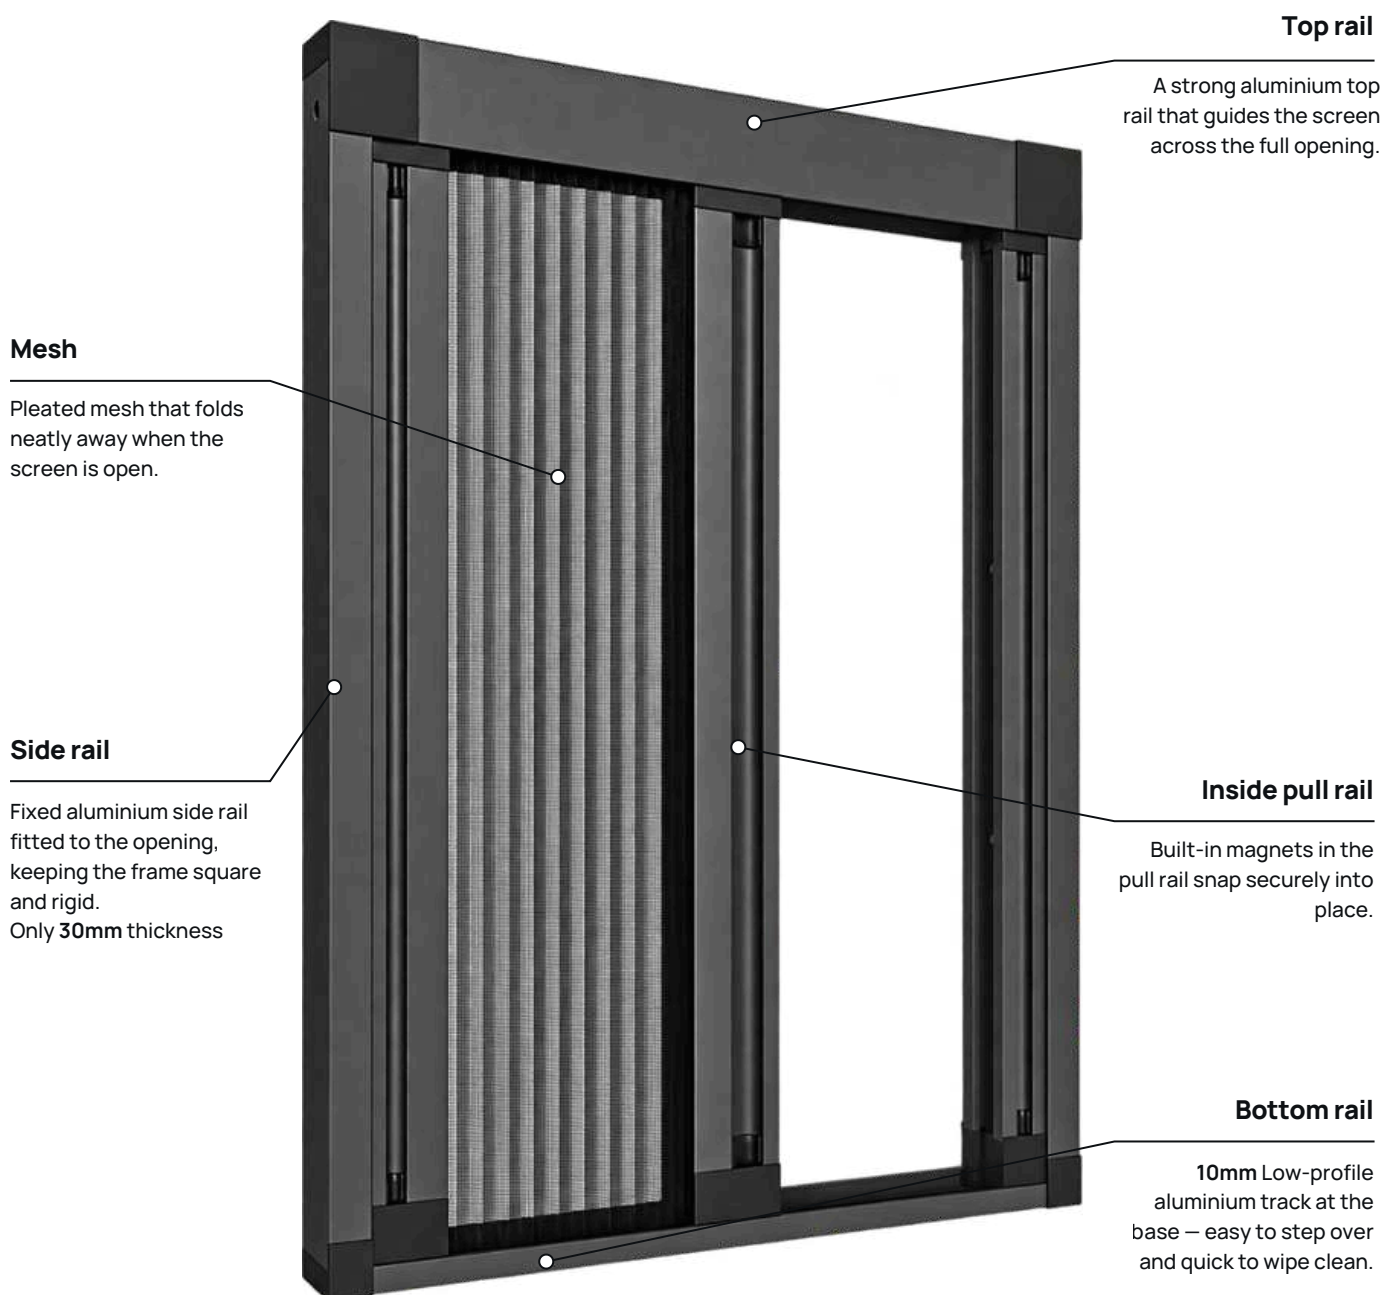

For sliding doors with fixed panels, we fit the flyscreen to the opening section only – fixed panels don't need one. For a double sliding door, a single-size flyscreen is usually all you need.

Made by Window Art, right here in Christchurch

Every flyscreen is made to measure in our own Christchurch factory, typically within 5–10 working days. Because we make it ourselves, we know every part of it – so if you ever need an adjustment, a repair or a replacement part down the track, you're dealing directly with the people who built it.

Anatomy of our pleated flyscreen

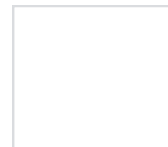

Every part is chosen for strength, smooth operation and a clean, low-profile look.

Your colour, your finish

Match your flyscreen to your joinery.
